From March [redacted] through May [redacted] show AuthZ by PLS integration type. Include Rapid, TAAP, and whitelabel traffic.

Here's the AuthZ breakdown by PLS integration type for **March [redacted]– May [redacted]**

Authorization Success Rate (AuthZ) by PLS Integration Type

PLS Integration Type	Transactions	Auth Attempts	Successful Auths	AuthZ Rate
Rapid	[redacted]	[redacted]	[redacted]	[redacted]
TAAP	[redacted]	[redacted]	[redacted]	[redacted]
WLT (Whitelabel)	[redacted]	[redacted]	[redacted]	[redacted]
Total PLS	[redacted]	[redacted]	[redacted]	[redacted]

Key Takeaways

- **Rapid leads** with the highest AuthZ at [redacted] and also accounts for the largest share of PLS volume [redacted] of total PLS attempts).
- **TAAP** sits in the middle at [redacted] with a meaningful [redacted] gap below Rapid.
- **Whitelabel (WLT)** has the lowest AuthZ at [redacted] — a [redacted] **gap** vs. Rapid — and represents the smallest volume segment [redacted] of PLS attempts).

The performance gap between Rapid and WLT is notable and may warrant further investigation into card mix, processor routing, or partner-level patterns within WLT.

> ⚠ **Coverage Caveat:** PLS attribution (`pls_integration_type`) is reliable from **March [redacted] onward**. Data prior to March [redacted] may have incomplete PLS coverage and should not be used for PLS analysis.

Correct & Teach

From March [redacted] through May [redacted] calculate IASR for PLS traffic by integration type and show attempts and successes.

Here are the IASR results for PLS traffic from **March [redacted]– May [redacted]**

Initial Authorization Success Rate (IASR) by PLS Integration Type

March [redacted] – May [redacted] | First authorization attempts only (no retries)

PLS Integration Type	Initial Attempts	Initial Successes	IASR
Rapid	[redacted]	[redacted]	[redacted]
TAAP	[redacted]	[redacted]	[redacted]
WLT (Whitelabel)	[redacted]	[redacted]	[redacted]
Total PLS	[redacted]	[redacted]	[redacted]

Key Takeaways

- **Rapid** leads with the highest IASR at [redacted] consistent with its strong AuthZ performance.
- **TAAP** sits at [redacted] a [redacted] **gap** below Rapid on first attempts.
- **WLT** has the lowest IASR at [redacted] — a significant [redacted] **gap** below Rapid, meaning nearly [redacted] in [redacted] first-attempt authorizations fails for WLT traffic.

IASR vs. AuthZ Comparison

Comparing IASR to the AuthZ rates from the prior analysis reveals how much retries are recovering:

Integration Type	IASR	AuthZ	Retry Lift
Rapid	[redacted]	[redacted]	[redacted]
TAAP	[redacted]	[redacted]	[redacted]
WLT	[redacted]	[redacted]	[redacted]

- **WLT benefits the most from retries** [redacted] lift), suggesting retries are doing meaningful recovery work for WLT traffic — but the underlying first-attempt decline rate is still notably higher than the other integration types.
- **Rapid** has minimal retry dependency [redacted] reflecting strong first-attempt performance.

> ⚠️ **Coverage Caveat:** PLS attribution (`pls_integration_type`) is reliable from **March [redacted] onward**. Data prior to March [redacted] may have incomplete PLS coverage.

Correct & Teach

For PLS whitelabel traffic from March [redacted] through May [redacted] show the top [redacted] PLS partners by transaction volume and AuthZ.

Here are the top [redacted] PLS Whitelabel partners by transaction volume for **March [redacted] – May [redacted]**

Top [redacted] PLS Whitelabel Partners by Volume & AuthZ

March [redacted]– May [redacted] | WLT Integration Type | Card payments only

Rank	Partner	Transactions	Volume (USD)	AuthZ	vs. WLT Avg [redacted]
[redacted]	Delta	[redacted]	[redacted]	[redacted]	✅ [redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	✅ [redacted]
[redacted]	Expedia	[redacted]	[redacted]	[redacted]	🔴 [redacted]
[redacted]	United Airlines (US)	[redacted]	[redacted]	[redacted]	➡️ [redacted]
[redacted]	CIBC	[redacted]	[redacted]	[redacted]	✅ [redacted]
[redacted]	AARP	[redacted]	[redacted]	[redacted]	➡️ [redacted]
[redacted]	Riu [redacted]	[redacted]	[redacted]	[redacted]	🔴 [redacted]
[redacted]	Alaska Airlines	[redacted]	[redacted]	[redacted]	✅ [redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	🔴 [redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	✅ [redacted]

WLT average AuthZ = [redacted] (from prior analysis)

Key Takeaways

🏆 **Volume Leaders**

- **Delta** dominates WLT traffic — [redacted] in volume [redacted] of this [redacted] cohort) with a strong [redacted] **AuthZ**, well above the WLT average.
- [redacted] and **Expedia** are the [redacted] and [redacted] partners by volume, together contributing another [redacted]

⚠️ **AuthZ Concerns**

- **Riu** [redacted] is the standout underperformer at [redacted] **AuthZ** — a significant [redacted] **below** the WLT average. Despite being [redacted] by volume, its decline rate is nearly [redacted] in [redacted] transactions.
- **Expedia** (the WLT partner, not the Expedia brand) sits at [redacted] — [redacted] below average — and is the [redacted] largest partner, meaning the volume impact of its underperformance is material [redacted]
- [redacted] (SAS Airlines) is also below average at [redacted]

✅ **Strong Performers**

- **Delta**, **CIBC**, [redacted] **Alaska Airlines**, and [redacted] all outperform the WLT average, with Delta and CIBC leading at [redacted] and [redacted] respectively.

> ⚠️ **Coverage Caveat:** PLS attribution (`pls_integration_type` , `pls_partner_name`) is reliable from **March** [redacted] **onward**. Data prior to this date may have incomplete PLS coverage.

Corre[redacted]th

From March [redacted] through May [redacted] for PLS traffic, show performance by PLS integration type and rule_id. Include initial attempts, initial successes, IASR and AuthZ. Show the top [redacted] integration type + rule_id combinations.

[redacted]

[redacted]AM

Agent UI

Here are the top [redacted]PLS integration type + rule_id combinations by initial attempts for **March [redacted]– May [redacted]**

PLS Performance by Integration Type × Rule ID

March [redacted]– May [redacted] | All PLS (Rapid, TAAP, WLT) | Card payments only

Rank	Integration	Rule ID	Initial Attempts	Initial Successes	IASR	Terminal Attempts	Terminal Successes	AuthZ
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	taap	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	wlt	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	wlt	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	taap	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	wlt	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	taap	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	rapid	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	wlt	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

Key Observations

Integration Type Patterns

Integration	Rows in Top [redacted]	Typical IASR Range
Rapid	[redacted]	[redacted]– [redacted]
TAAP	[redacted]	[redacted]– [redacted]
WLT	[redacted]	[redacted]– [redacted]

[redacted]

[redacted] AM

Agent UI

- **TAAP** is the standout performer — all [redacted] TAAP rules sit at [redacted] **IASR**, with virtually no retry lift needed (IASR ≈ AuthZ).
- **Rapid** dominates by volume [redacted] of top [redacted] rows) and performs well overall, mostly in the [redacted] range.
- **WLT** shows the widest variance and the most room for improvement.

⚠️ **Underperformers to Watch**

- **WLT / Rule** [redacted] — IASR of [redacted] is the lowest in this cohort. However, retries recover [redacted] bringing AuthZ to [redacted] Still well below WLT peers.
- **WLT / Rule** [redacted] — IASR of [redacted] AuthZ of [redacted] — a [redacted] retry lift, but still underperforming.
- **Rapid / Rule** [redacted] — IASR of [redacted] AuthZ of [redacted] — the weakest Rapid rule in this top [redacted]

✅ **Retry Lift Insight**

The **IASR→AuthZ Lift** column shows how much retries recover. WLT rules benefit most from retries (up to [redacted] while TAAP and most Rapid rules show near-zero lift — meaning they either rarely fail or rarely retry. This suggests WLT traffic has more retry-recoverable declines, which could be an optimization opportunity.

> ⚠️ **Coverage Caveat:** PLS attribution (`pls_integration_type` , `rule_id`) is reliable from **March** [redacted] **onward**. Data prior to this date may have incomplete PLS coverage.
