Ready for your next PayIn question.

Use the prompt bar below. Scope, data coverage, and tips live on the **About Agent** page.

can I find the refund % (by transaction count) in BR MOR transactions beyond 90 days of payment? will be great if we can segment this by Adyen vs dLocal, BEX vs HCOM . Data from past year and past 3 months will be super helpful.

Great, the query succeeded! Here's a comprehensive breakdown of the results:

🇧🇷 Brazil MOR — Refund Rate Beyond 90 Days of Payment

Scope: Brazil PoSa | Adyen & dLocal | BEX (Expedia) & HCOM (Hotels.com) | Card transactions only

> Metric definitions:
>
> - **Overall Refund %** = All refunded transactions / Total transactions
> - **>90d Refund % (of Total)** = Transactions refunded after 90+ days / Total transactions
> - **>90d Refund % (of Refunded)** = Transactions refunded after 90+ days / All refunded transactions ← *the most meaningful signal for late-refund behavior*

📅 Past 3 Months (Feb–May 2026)

Processor	Brand	Total Txns	Refunded Txns	Overall Refund %	>90d Refunds	>90d % of Total	>90d % of Refunded
Adyen	BEX (Expedia)	13,741	1,048	7.6%	0	0.0%	0.0%
Adyen	HCOM (Hotels.com)	497,940	38,674	7.8%	0	0.0%	0.0%
dLocal	BEX (Expedia)	5,496	603	11.0%	0	0.0%	0.0%
dLocal	HCOM (Hotels.com)	149,211	12,766	8.6%	0	0.0%	0.0%

> ⚠️ **Zero >90d refunds in the past 3 months** — this is expected! Transactions from the past 3 months are at most ~90 days old, so by definition, none can yet have a refund recorded beyond 90 days of the payment date. This window is too short to capture late refunds.

📅 Past 12 Months (May 2025–May 2026)

Processor	Brand	Total Txns	Refunded Txns	Overall Refund %	>90d Refunds	>90d % of Total	>90d % of Refunded
Adyen	BEX (Expedia)	71,226	8,251	11.6%	253	0.4%	**3.1%**
Adyen	HCOM (Hotels.com)	2,310,016	240,256	10.4%	9,775	0.4%	**4.1%**
dLocal	BEX (Expedia)	7,146	824	11.5%	5	0.1%	**0.6%**
dLocal	HCOM (Hotels.com)	191,721	18,281	9.5%	221	0.1%	**1.2%**

📖 Key Takeaways

1. **Adyen has significantly more late refunds than dLocal:**
   - On Adyen, **3–4% of all refunds** happen beyond 90 days of payment (3.1% for BEX, 4.1% for HCOM)
   - On dLocal, this is much lower at **0.6–1.2%**
   - This could reflect differences in how each processor handles refund windows, or differences in the booking types routed through each processor
2. **HCOM shows slightly higher late-refund rates than BEX on Adyen:**
   - HCOM/Adyen: 4.1% of refunds are >90d vs BEX/Adyen: 3.1%
   - This may relate to HCOM's booking mix (e.g., longer-stay hotel bookings with later cancellation windows)
3. **Volume context:** Adyen dominates Brazil MOR volume — HCOM/Adyen alone accounts for 2.3M transactions vs 192K for dLocal/HCOM. The absolute count of late refunds on Adyen (9,775 for HCOM) is much larger than dLocal (221 for HCOM).
4. **3-month window is not useful for this analysis** — as noted above, transactions from the past 3 months haven't had enough time to generate >90d refunds. The 12-month view is the right lens here.

Would you like me to drill deeper — for example, by card brand, by month trend, or by looking at the distribution of refund timing (e.g., 90–120d, 120–180d, 180d+)?
